DETAILED ACTION

Response to Amendment

This office action is in response to amendment filed on 9/15/09. Previously presented claims 4-8 and 10-16 have been cancelled and claims 17-27 have been added.

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 6/25/09 has been considered by the examiner.

Allowable Subject Matter

2. Claims 17-27 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The invention of the current application pertains to selecting a spread code in a radio communication system between a mobile station and a base station that comprise a plurality of cells with different frequency bands that exist at the same location. With respect to independent claim 17, the novelty of the invention lies in the combination of components that define the structure of the radio control device and their associated functions for selecting an unused channelization code for a mobile station. The subject matter of the claim recites that the radio control device comprises a first channelization code selection unit that controls selection of a scrambling code of a first frequency and

a second channelization code selection unit that controls selection of a scrambling code of a second frequency. These code selection units are controlled by a control unit that instructs the first code selection unit to use a primary scrambling code of the first frequency to look for an unused channelization code. If it is determined that there is no unused channelization code for the primary scrambling code for the first frequency, then the control unit instructs the second channelization code selection unit to use a primary scrambling code of the second frequency to look for an unused channelization code. If it is determined that there is no unused channelization code for the primary scrambling code for the second frequency, then the control unit instructs the first channelization code selection unit to use a secondary scrambling code of the first frequency to look for an unused channelization code. This particular structure and trial method is neither taught nor suggested by the prior art.

The closest prior art not on record is Takano (US 2003/0123529) and Lundh et al. (US 6,804,214). Takano discloses a spreading code assigning method wherein a determination is made as to whether a particular set of codes are unused or not. If the codes are unused then they are assigned to the mobile terminal. If they are used then a determination is made on whether or not a different set of codes are unused. The process repeats until unused codes are found which are then assigned to the mobile station (paragraph 159; figure 11). Although Takano teaches the broad concept of searching a first set of codes to locate an unused channelization code and searching a second set of codes if no unused codes are found, Takano differs from the invention of the current application because there is no teaching or suggestion that the codes are

assigned using two different channelization code selection units corresponding to different frequencies in a base station control device and the specific trial method performed by these code selection units.

Lundh discloses a system and method for implementing multiple carriers in cellular networks. Lundh teaches that a CDMA cell comprises three carriers that are each associated with a different frequency band. The primary carrier may have primary scrambling codes and zero or more secondary scrambling codes. The secondary carrier may have one or more secondary scrambling codes (column 3, lines 64-67; column 4, lines 1, 34-38). Although Lundh teaches the broad concept of inter-frequency carriers comprising primary and secondary scrambling codes, Lundh differs from the invention of the current application because there is no teaching or suggestion that the codes are assigned using two different channelization code selection units corresponding to different frequencies in a base station control device and the specific trial method performed by these code selection units.

Accordingly, independent claim 17 and independent claim 21 which recites similar subject matter are allowable for these reasons and the reasons set forth in Applicant's response filed on 9/15/09.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
